DATA SCIENCE FULL STACK

1. **Excel & Advance Excel**

2. **C programming**

3. **Core Python**

- Python Syntax and Basics
- Data Structures (Lists, Tuples, Dictionaries, Sets)
- Functions and Modules
- Exception Handling and File I/O

4. **Advanced Python**

- Object-Oriented Programming (OOP)
- Working with Libraries (NumPy, Pandas, Sci-pi)
- Multithreading and Multiprocessing
- APIs and Web Scraping

5. **MySQL for Database Management**

- Relational Database Basics
- Writing Queries (SELECT, INSERT, UPDATE, DELETE)
- Database Design and Normalization
- Integrating MySQL with Python

6. **Power Bi**

- Data Transformation
- Charts and Page Layout
- Advanced Analytics
- Building Reports & Special Visualizations
- Building Narratives with Fabric
- Working with Co-pilot feature
-

A Power BI course typically covers the fundamentals of data visualization and business intelligence using the Microsoft Power BI platform. Key topics include data sources, data transformation, data modelling, report and dashboard creation, and publishing and sharing reports. The course will also introduce DAX (Data Analysis Expressions) for advanced calculations and Power BI's online service for collaboration.
